Cognitive Psychology and Global Knowledge

Cognitive Psychology · Answer Key · 10 Questions

1. Which cognitive phenomenon explains why people often incorrectly estimate the capital of Australia to be Sydney rather than Canberra due to Sydney's global media prominence?

A) The Availability Heuristic
B) The Primacy Effect
C) The Anchoring Bias
D) The Halo Effect

2. The study of mental maps, used by cognitive psychologists to understand spatial navigation, was famously applied to the city of Venice to analyze how tourists form:

A) Episodic memories
B) Cognitive maps
C) Procedural routines
D) Sensory buffers

3. In studies of visual perception, the 'cross-race effect' in facial recognition has been documented extensively, including in demographic studies conducted in which diverse Southeast Asian nation?

A) Singapore
B) Vietnam
C) Laos
D) Cambodia

4. Cognitive psychologists studying language acquisition have noted that the 'critical period hypothesis' is supported by linguistic data from the unique 'isolate' language family found in which European region?

A) The Basque Country
B) Brittany
C) Cornwall
D) Sardinia

5. The 'Stroop Effect', a classic test of selective attention, has been adapted by researchers in which major Japanese city to study how kanji characters influence processing speed compared to kana?

A) Kyoto
B) Osaka
C) Tokyo
D) Sapporo

6. Research into 'auditory scene analysis' often uses the acoustic characteristics of specific environments, such as the unique soundscapes of the Amazon Rainforest, to study:

A) Phonological loops
B) Bottom-up processing
C) Chunking
D) Flashbulb memory

7. Cognitive studies regarding the 'serial position effect' have been validated using list-learning tasks among indigenous populations in which African nation?

A) Botswana
B) Nigeria
C) Kenya
D) Ethiopia

8. The concept of 'environmental affordances' in cognitive ergonomics was first heavily researched in the design of public transportation systems in which Scandinavian country?

A) Sweden
B) Denmark
C) Norway
D) Finland

9. To measure 'working memory capacity' across different cultures, psychologists have conducted digit-span tests in Mexico City, specifically examining the impact of language on:

A) Digit articulation rate
B) Visual spatial reasoning
C) Implicit bias
D) Sensory adaptation

10. The study of 'spatial cognition' in nomadic tribes, such as those historically found in the Gobi Desert, focuses on how individuals maintain orientation using:

A) Allocentric frames of reference
B) Egocentric memory
C) Iconic storage
D) Semantic priming
