Supply Chain Management in Medical Systems

Supply Chain Management · Practice Test · 15 Questions

1. Which component of the human circulatory system acts as the primary 'hub' for the distribution of oxygenated blood to the systemic supply chain?

A) The pulmonary artery
B) The left ventricle
C) The superior vena cava
D) The right atrium

2. In the 'supply chain' of human respiration, what is the specific site of gas exchange where oxygen transitions from the external environment into the bloodstream?

A) Bronchioles
B) Trachea
C) Alveoli
D) Pharynx

3. The liver functions as a critical 'quality control and processing center' in the human supply chain; which process involves the breakdown of toxins into less harmful substances?

A) Gluconeogenesis
B) Deamination
C) Cytochrome P450 oxidation
D) Glycogenesis

4. Which hormone acts as the 'logistics controller' for glucose uptake, facilitating the movement of glucose from the blood into cells?

A) Glucagon
B) Insulin
C) Cortisol
D) Adrenaline

5. In the renal system's 'filtering supply chain', which structure serves as the primary unit for the filtration of blood and the formation of urine?

A) Nephron
B) Ureter
C) Renal pelvis
D) Loop of Henle

6. What is the primary function of the lymphatic system in the body's 'waste management and distribution' supply chain?

A) Oxygen transport
B) Neurotransmitter synthesis
C) Immune cell transport and interstitial fluid return
D) Thermal regulation

7. Which organ serves as the 'storage facility' for red blood cells and acts as a filter for 'defective inventory' (senescent erythrocytes) in the circulatory system?

A) Pancreas
B) Gallbladder
C) Spleen
D) Thymus

8. In the endocrine supply chain, which gland acts as the 'master distributor' of hormonal signals to the thyroid, adrenals, and gonads?

A) Pineal gland
B) Pituitary gland
C) Hypothalamus
D) Parathyroid gland

9. Which vitamin is essential for the 'supply chain' of blood coagulation and is produced primarily by gut microbiota in the large intestine?

A) Vitamin K
B) Vitamin C
C) Vitamin B12
D) Vitamin D

10. The small intestine utilizes which structure to maximize the 'efficiency of resource absorption' from the digestive supply chain?

A) Rugae
B) Villi and microvilli
C) Haustra
D) Peyer's patches

11. What is the anatomical 'loading dock' where nutrients absorbed in the gastrointestinal tract first enter the portal venous system?

A) Hepatic vein
B) Hepatic portal vein
C) Inferior mesenteric artery
D) Celiac trunk

12. During the 'logistics' of muscle contraction, which ion is released from the sarcoplasmic reticulum to trigger the binding of actin and myosin?

A) Potassium
B) Sodium
C) Calcium
D) Magnesium

13. Which cells in the human 'defense supply chain' are responsible for the production of antibodies to neutralize specific pathogens?

A) T-helper cells
B) B-lymphocytes
C) Neutrophils
D) Basophils

14. In the thermoregulatory supply chain, which part of the brain functions as the 'thermostat' to adjust blood flow to the skin?

A) Cerebellum
B) Hippocampus
C) Hypothalamus
D) Pons

15. Which mineral acts as the core 'structural material' in the hemoglobin molecule required for the transport of oxygen in the blood?

A) Magnesium
B) Calcium
C) Iron
D) Zinc
