

# Anatomy of the Eye

Biology · Answer Key · 8 Questions

---

**1. The cornea is the eye's outermost layer. What is its main function?**

- A) Focusing light
- B) Protecting the eye**
- C) Controlling eye color
- D) Producing tears

**2. Which part of the eye controls the amount of light that enters?**

- A) Retina
- B) Lens
- C) Pupil**
- D) Optic Nerve

**3. What is the colored part of the eye called?**

- A) Sclera
- B) Iris**
- C) Choroid
- D) Retina

**4. Which part of the eye is responsible for detecting light and color?**

- A) Lens
- B) Retina**
- C) Cornea
- D) Pupil

**5. What is the function of the lens in the eye?**

- A) To protect the eye
- B) To focus light onto the retina**
- C) To control the amount of light entering the eye
- D) To provide nutrients to the eye

**6. The optic nerve transmits signals from the eye to which part of the body?**

- A) Ears
- B) Brain**
- C) Spinal Cord
- D) Nose

**7. What is the white part of the eye called?**

- A) Iris
- B) Pupil
- C) Sclera**
- D) Cornea

**8. Which structure is responsible for producing tears?**

- A) Pupil
- B) Eyelid
- C) Lacrimal gland**
- D) Retina
