

East Asia's Cutting-Edge: 2025-2026 Breakthroughs in Lunar Exploration, Fusion Energy, and Quantum Computing

Science · Practice Test · 2 Questions

1. What significant finding did China's Chang'e-6 mission samples, brought back in 2025, reveal about the Moon's far side?

- A) Evidence of past microbial life.
- B) A drier, depleted mantle and evidence of a magnetic field rebound.
- C) Large underground water reservoirs.
- D) Unidentified ancient alien structures.

2. In 2025, China's Experimental Advanced Superconducting Tokamak (EAST) achieved a new world record for sustained high-confinement plasma operation. What was the approximate duration and temperature?

- A) 100 seconds at 50 million degrees Celsius.
- B) 500 seconds at 80 million degrees Celsius.
- C) 1066 seconds at 100 million degrees Celsius.
- D) 2000 seconds at 120 million degrees Celsius.
