

Advanced Aviation History Trivia

Aviation History · Answer Key · 12 Questions

1. Which of the following innovations, developed by Frank Whittle and Hans von Ohain independently, was a prerequisite for the development of jet aircraft?

- A) The variable-pitch propeller
- B) The gyroscopic autopilot
- C) The turbojet engine**
- D) The pressurized cabin

2. The development of the first practical helicopter is largely attributed to Igor Sikorsky. What was the name of his groundbreaking single-rotor helicopter, which first flew in 1939?

- A) Flettner Fl 282 Kolibri
- B) Focke-Wulf Fw 61
- C) Sikorsky VS-300**
- D) Kellett XR-8

3. During World War II, the British developed a revolutionary airborne radar system that significantly aided in detecting enemy aircraft. What was this system codenamed?

- A) Chain Home**
- B) ASV (Air to Surface Vessel)
- C) H2S
- D) Gee

4. The sound barrier, the speed at which the apparent speed of sound increases, was first officially broken in level flight by Chuck Yeager in the Bell X-1 aircraft. In what year did this historic flight occur?

- A) 1945
- B) 1947**
- C) 1949
- D) 1951

5. The development of the supercritical airfoil was crucial for improving the efficiency of high-speed subsonic aircraft. Which aeronautical engineer is most closely associated with its development at NASA?

- A) Robert T. Jones**
- B) John C. Houbolt
- C) Kelly Johnson
- D) Bernard L. Hicks

6. The first successful non-stop circumnavigation of the Earth by air was achieved in 1986 by the aircraft 'Voyager'. What was unique about its design that enabled this extended flight?

- A) Its nuclear-powered engine
- B) Its reliance on solar energy
- C) Its incredibly fuel-efficient engine and lack of windows**
- D) Its ability to refuel mid-air using blimps

7. Which French aviator and writer, known for his philosophical novels and exploration of human existence, also served as a test pilot and airmail pilot in the early days of aviation?

- A) André Gide
- B) Albert Camus
- C) Antoine de Saint-Exupéry**
- D) Jean-Paul Sartre

8. The de Havilland Comet was the world's first commercial jet airliner. However, its early career was plagued by a series of catastrophic accidents. What was the primary cause of these crashes?

- A) Engine failures due to overheating
- B) Structural fatigue from pressurization cycles**
- C) Pilot error during landing approaches
- D) Sabotage by rival aircraft manufacturers

9. The 'Enola Gay', a Boeing B-29 Superfortress, is historically significant for its role in the atomic bombing of Hiroshima. What was the name of the pilot who flew the aircraft on that mission?

- A) Paul Tibbets**
- B) Charles Lindbergh
- C) Jimmy Doolittle
- D) Chuck Yeager

10. The development of the Concorde supersonic transport (SST) was a joint venture between Britain and France. What was the primary aerodynamic challenge that had to be overcome to achieve sustained supersonic flight?

- A) Drag reduction at supersonic speeds**
- B) Minimizing sonic booms over land
- C) Achieving stable flight at Mach 2
- D) Managing engine efficiency at high altitudes

11. Which influential aircraft designer, known for his work on the P-51 Mustang and the XB-70 Valkyrie, also founded his own aerospace company?

- A) Howard Hughes
- B) Jack Northrop
- C) Kelly Johnson**
- D) Grumman

12. The Wright brothers' success in achieving controlled, sustained flight was due to their systematic approach to research. Which of the following was NOT a key element of their approach?

- A) Wind tunnel testing of wing shapes
- B) Development of a three-axis control system
- C) Focus on engine power over aerodynamic control**
- D) Extensive glider experimentation
