

Cryptozoology and Human Biology Facts

Cryptozoology And Health · Practice Test · 10 Questions

1. Cryptozoologists often search for Bigfoot, a bipedal creature. How many bones are typically found in an adult human foot?

- A) 12
- B) 26
- C) 40
- D) 52

2. Many legends describe the 'Yeti' living in cold mountains. Which human organ is primarily responsible for regulating internal body temperature?

- A) Heart
- B) Lungs
- C) Hypothalamus
- D) Stomach

3. Some tales mention 'merfolk' adapted to underwater life. Which system in the human body is responsible for transporting oxygen via blood cells?

- A) Circulatory System
- B) Digestive System
- C) Skeletal System
- D) Nervous System

4. Sightings of 'Bigfoot' are often reported in low light. Which part of the human eye is most sensitive to low-light conditions?

- A) Iris
- B) Cornea
- C) Rods
- D) Cones

5. Cryptozoology studies creatures that are supposedly large. What is the largest organ of the human body?

- A) Liver
- B) Skin
- C) Brain
- D) Lungs

6. Some cryptids are described as having great speed. Which mineral is essential for human muscle contraction and nerve function?

- A) Calcium
- B) Iron
- C) Sodium
- D) Zinc

7. Stories of the 'Chupacabra' involve blood-drinking. Which component of human blood is responsible for fighting off infections?

- A) Red blood cells
- B) Platelets
- C) Plasma
- D) White blood cells

8. Reports of 'giant' cryptids often focus on height. Which gland in the human body is primarily responsible for producing growth hormones?

- A) Pituitary gland
- B) Thyroid
- C) Adrenal gland
- D) Pancreas

9. Cryptozoologists often trek through dense forests. What is the primary function of the human lungs?

- A) Filtering blood
- B) Gas exchange
- C) Digesting food
- D) Storing energy

10. If a cryptid were real, it would need energy to move. What is the primary sugar used by human cells for energy?

- A) Lactose
- B) Fructose
- C) Glucose
- D) Sucrose
