

Understanding the Endocrine System

Biology · Practice Test · 5 Questions

1. What are the specialized organs that produce and release hormones?

- A) Glands
- B) Muscles
- C) Nerves
- D) Bones

2. Where are hormones typically secreted to travel through the body?

- A) Into the stomach
- B) Directly into the bloodstream
- C) Onto the skin surface
- D) Into the lungs

3. What is the primary function of hormones in the human body?

- A) To digest food
- B) To act as chemical messengers
- C) To filter blood
- D) To provide structural support

4. Which body system is primarily responsible for hormone production?

- A) Endocrine system
- B) Digestive system
- C) Respiratory system
- D) Skeletal system

5. What happens after a gland releases a hormone into the blood?

- A) It stays in the gland
- B) It travels to target cells
- C) It is immediately destroyed
- D) It turns into waste
