

Milestones in Human Biology

Human Biology · Practice Test · 8 Questions

1. Which English physician published the first accurate description of blood circulation through the human body in 1628?

- A) William Harvey
- B) Louis Pasteur
- C) Edward Jenner
- D) Gregor Mendel

2. Who discovered the main human ABO blood groups in the year 1900?

- A) Alexander Fleming
- B) Karl Landsteiner
- C) Robert Koch
- D) Charles Darwin

3. In 1953, James Watson and Francis Crick determined the double-helix structure of which molecule found in human cells?

- A) Insulin
- B) Hemoglobin
- C) DNA
- D) Cholesterol

4. Which English doctor developed the world's first successful vaccine in 1796 to protect against smallpox?

- A) Edward Jenner
- B) Jonas Salk
- C) Louis Pasteur
- D) Joseph Lister

5. Who discovered penicillin in 1928, leading to the creation of modern antibiotics used to treat bacterial infections in humans?

- A) Marie Curie
- B) Alexander Fleming
- C) Antoine van Leeuwenhoek
- D) Galen

6. Which 16th-century physician is often called the founder of modern human anatomy due to his accurate anatomical drawings?

- A) Hippocrates
- B) Galen
- C) Andreas Vesalius
- D) Aristotle

7. In which year was the international scientific effort known as the Human Genome Project officially completed?

- A) 1980
- B) 1993
- C) 2003
- D) 2018

8. In 1895, Wilhelm Röntgen made a major breakthrough in imaging the human skeleton by discovering which type of radiation?

- A) Microwaves
- B) X-rays
- C) Infrared light
- D) Radio waves
