AI and ML in Space Exploration

AI And ML · Practice Test · 18 Questions

1. What does NASA use AI to identify in images taken by space telescopes?

A) Superheroes
B) Exoplanets
C) Atlantis
D) Treasure maps

2. Which planet has been mapped by AI to help rovers navigate its rocky surface?

A) Mars
B) Venus
C) Jupiter
D) Saturn

3. AI helps astronomers detect these massive explosions in distant galaxies.

A) Birthday cakes
B) Supernovae
C) Thunderstorms
D) Fireworks

4. Machine learning algorithms help scientists sort through data to find signals from where?

A) Deep space
B) The ocean floor
C) The center of the Earth
D) Inside a computer

5. What do AI programs help classify by looking at their shapes in deep space images?

A) Clouds
B) Galaxies
C) Volcanoes
D) Tsunamis

6. AI models are used to predict the behavior of this active layer of the Sun.

A) Atmosphere
B) Corona
C) Crust
D) Core

7. Machine learning assists in identifying these objects that orbit the Sun and can be found near Earth.

A) Asteroids
B) Rainbows
C) Submarines
D) Skyscrapers

8. Scientists use AI to analyze light patterns to determine the composition of what?

A) Distant stars
B) Plastic toys
C) Garden soil
D) Ocean water

9. AI helps ground controllers manage the communication relay for satellites orbiting which planet?

A) Earth
B) Mercury
C) Mars
D) Neptune

10. Machine learning helps identify craters on the Moon by analyzing what type of data?

A) Audio clips
B) Satellite imagery
C) Taste tests
D) Weather reports

11. AI algorithms help scientists detect 'noise' versus real data when searching for signs of what in space?

A) Exoplanets
B) Missing socks
C) Lost keys
D) Ghosts

12. NASA uses machine learning to better understand the weather patterns on which giant gas planet?

A) Jupiter
B) Pluto
C) Ceres
D) The Moon

13. AI is used to help autonomous rovers avoid what kind of hazards on alien terrain?

A) Boulders
B) Traffic jams
C) Trees
D) Street lights

14. Machine learning helps sort data from space missions to find rare events like what?

A) Passing comets
B) Rain showers
C) Dog barking
D) Car horns

15. AI helps scientists estimate the age of stars by studying their what?

A) Brightness
B) Name
C) Height
D) Weight

16. Which space agency uses AI to process massive amounts of telescope data?

A) NASA
B) The local library
C) A bakery
D) A toy store

17. AI helps improve the clarity of images taken by telescopes by removing what?

A) Interference
B) Paint
C) Stickers
D) Tape

18. Machine learning is used to track the path of space debris orbiting which planet?

A) Earth
B) Jupiter
C) Saturn
D) Venus
