The Science and Mechanics of Card Games

Card Games · Answer Key · 8 Questions

1. In a standard 52-card deck, what is the exact probability of drawing a single Heart from a full, well-shuffled deck?

A) 1/4
B) 1/13
C) 1/2
D) 1/52

2. Which mathematical principle describes the process by which a standard deck of cards becomes randomized through repeated riffle shuffling?

A) The Law of Large Numbers
B) The Gilbert-Shannon-Reeds model
C) The Bayesian Inference theory
D) The Central Limit Theorem

3. Historical records and physical artifacts suggest that modern playing cards evolved from card games originating in which country during the 9th century?

A) France
B) Italy
C) China
D) Egypt

4. How many distinct ways can a standard deck of 52 cards be arranged?

A) 52! (52 factorial)
B) 52 squared
C) 52 multiplied by 4
D) 1,000,000

5. In the study of game theory, what term is used to describe a game like Poker where players lack complete information about the state of the game?

A) Perfect information game
B) Zero-sum game
C) Imperfect information game
D) Cooperative game
