Biomimetic and Natural Architecture

Architecture · Practice Test · 20 Questions

1. Which structure, inspired by the self-cooling ventilation system of termite mounds, was designed by Mick Pearce in Zimbabwe?

A) The Gherkin
B) Eastgate Centre
C) The Eden Project
D) Lotus Temple

2. What is the primary material used by the weaver bird to construct its intricate, suspended nest architectures?

A) Mud and clay
B) Pebbles and stones
C) Woven grass and fibers
D) Spun spider silk

3. The Eastgate Centre in Harare utilizes which specific natural cooling principle observed in termite mounds?

A) Passive evaporative cooling
B) Thermal mass and stack effect ventilation
C) Solar chimney induction
D) Water-cooled floor slabs

4. Which famous structure's design was inspired by the structural efficiency of the honeycomb?

A) Eden Project
B) Burj Khalifa
C) Sydney Opera House
D) Fallingwater

5. What animal's shell structure is frequently studied by architects for its high strength-to-weight ratio and dome geometry?

A) Crab
B) Snail
C) Tortoise
D) Oyster

6. The 'Eden Project' in Cornwall, England, uses hexagonal steel framing to mimic which natural biological structure?

A) Honeycomb
B) Leaf vein network
C) Pinecone scales
D) Radiolaria skeletons

7. Which architectural element is directly modeled after the physical structure of a tree trunk to support heavy loads?

A) Cantilever
B) Flying buttress
C) Column
D) Atrium

8. Beavers modify their environment by building dams; what is the primary architectural purpose of the 'lodge' they build?

A) Water filtration
B) Protection from predators
C) Food storage
D) Sun bathing

9. The 'Bird's Nest' stadium (Beijing National Stadium) mimics the chaotic but structural stability found in what?

A) Spider webs
B) Twig nests
C) Coral reefs
D) Tree roots

10. Which architectural material is famously 'self-healing' when cracked, similar to the way trees heal their bark?

A) Bioconcrete
B) Tempered glass
C) Structural steel
D) Reinforced carbon fiber

11. What natural phenomenon do 'wind-catcher' towers (badgirs) in Persian architecture replicate to cool buildings?

A) Ocean currents
B) Directional air flow through canyon gaps
C) Termite mound ventilation
D) The cooling effect of forest canopies

12. The roof of the Sydney Opera House is inspired by the geometric shapes of what?

A) Seashells
B) Sails
C) Bird wings
D) Pine needles

13. Which creature's silk-spinning technique has inspired new structural engineering methods for high-tensile building materials?

A) Caterpillar
B) Spider
C) Silkworm
D) Bee

14. What kind of natural structure is the 'Lotus Temple' in New Delhi designed to replicate?

A) A blooming lotus flower
B) A mountain peak
C) A forest canopy
D) A river delta

15. The 'BIQ House' in Germany is the world's first building to use what to provide shade and generate energy?

A) Algae-filled glass panels
B) Solar-tracking sunflowers
C) Hanging vines
D) Moving stone shutters

16. Which animal creates nests using mud that dries to the strength of baked brick?

A) Swallow
B) Badger
C) Fox
D) Mole

17. What specific aspect of a coral reef do architects study to design 'living' breakwaters that grow over time?

A) Calcium carbonate accumulation
B) Color variation
C) Symmetry
D) Symbiotic algae

18. The design of the 'Gherkin' (30 St Mary Axe) utilizes a spiral structural pattern found in which natural object?

A) Venus flower basket sponge
B) Pinecone
C) Sunflower head
D) DNA helix

19. What architectural feature allows certain buildings to mimic the 'breathability' of a human lung?

A) Dynamic facades
B) Deep foundations
C) Green roofs
D) Central staircases

20. The 'Sagrada Família' columns are designed to mimic which natural form to better distribute weight?

A) Tree branches
B) River currents
C) Crystalline structures
D) Human skeletal bones
