

Mean, Median, and Mode: Understanding Averages

Statistics · Answer Key · 5 Questions

1. What is the mean? ?

- A) The average of a dataset**
- B) The middle value in a dataset
- C) The most frequent value in a dataset
- D) The range of a dataset

2. What is the median? ?

- A) The average of a dataset
- B) The middle value in a dataset**
- C) The most frequent value in a dataset
- D) The range of a dataset

3. What is the mode? ?

- A) The average of a dataset
- B) The middle value in a dataset
- C) The most frequent value in a dataset**
- D) The range of a dataset

4. How do you calculate the mean? ?

- A) Add all values and divide by the number of values**
- B) Find the middle value
- C) Identify the most frequent value
- D) Subtract the smallest value from the largest value

5. What do you do if there are two middle numbers when finding the median? ?

- A) Choose the larger number
- B) Choose the smaller number
- C) Average the two middle numbers**
- D) Ignore the numbers
